

# TWO EXTERNAL LEDs

```

Blink2leds

/*
  Blink2
  Turns on 2 LEDs on for one second, then off for one second, repeatedly.
  */

// the setup function runs once when you press reset or power the board
void setup() {
  // initialize digital pins 6 & 7 as outputs.
  pinMode(7, OUTPUT);
  pinMode(6, OUTPUT);
}

// the loop function runs over and over again forever
void loop() {
  digitalWrite(7, HIGH);
  digitalWrite(6, HIGH); // turn the LEDs on (HIGH is the voltage level)
  delay(1000);           // wait for a second
  digitalWrite(7, LOW);
  digitalWrite(6, LOW); // turn the LEDs off by making the voltage LOW
  delay(1000);           // wait for a second
}
  
```
